Chromosome Wikipedia

January 6th, 2019 - A chromosome is a long molecule of DNA that carries the genetic information for an organism. The word chromosome is derived from the Greek words *chroma* (colour) and *soma* (body). Chromosomes are made up of DNA and proteins. The DNA is packaged into a compact structure called a chromosome. Chromosomes are found in the nucleus of eukaryotic cells and in the cytoplasm of prokaryotic cells. Each chromosome contains many genes, which are the instructions for making proteins. The number and structure of chromosomes are characteristic of each species.
